EquatIO™

take the pain out of creating maths expressions digitally

EquatIO takes the pain out of creating equations, graphs and maths quizzes digitally

making maths digital

These days, students are more likely to pick up their devices than pen and paper to complete an assignment. But maths has been left behind in today's classrooms.

Writing equations and other maths expressions on a computer or tablet isn't easy - even basic fractions like 'three quarters' (¾) are a challenge. And it's even tougher adding square root signs, advanced fractions, powers and other mathematical symbols.

Until now.

Made to help mathematics and STEM teachers and students at all levels, **EquatIO** lets everyone create mathematical equations, formulas, graphs and more on their computer or Chromebook.

simplified digital expressions

Type, handwrite, or dictate any expression, with no tricky coding or maths languages to master. There's a huge library of ready-made expressions to save you time, from simple formulas to complex functions. And when you're done, just add the maths to your document with a click.

At a glance:

- Saves time and effort so you can focus on what matters most - maths comprehension and exploration

- Instantly understands what students are speaking or handwriting, turning expressions into clear, accurate on-screen formulas

- Intuitive prediction speeds up accurate entry of simple and complex maths expressions

- No need to learn any tricky mathematical languages or coding

encourage group collaboration & discussion

Hear what other educators are saying about EquatIO:

"EquatIO is what every maths and science student and educator has been longing for. It brings maths out of the 'pen and paper required' bubble and into the world of collaboration and communication; allowing students to digitally produce clear and proper mathematics, without hours of learning and practicing. If you're wondering how to begin to integrate meaningful technology into the classroom, EquatIO is where I would recommend to start."
Emily Fitzpatrick, Director of Professional Development, EdTech Team Canada
